

ECSE 321: Group 01 Team Contract

Santiago Padron David Tang Dragos Bajanica Bassam Baki Ethan Tran
 Jason Wang Minh Vo

February 2026

Instructions

Write your names and outline the expectations and agreements that your team would like to adopt throughout the semester. Be clear and realistic; this is not about “looking good”, it’s about setting yourselves up for success. Make sure all teammates get to weigh in on these decisions, regardless of in-class attendance. Each team member should sign this document (e-signatures are OK), indicating acceptance of these expectations and a shared intention to fulfill them

Contract

As a team, decide on how you will address the questions below. Write a brief description of the decisions you have reached. Feel free to add visuals, quotes, memes, etc. If it serves your team, you can include it in the document.

Who is in the team?

Name	What is one strength you bring to the team?	What is one skill you would like to improve upon?	What is one concern you have about working in a team?	Tell your teammates something about yourself
Santiago	I am organized and love to write documentation	More knowledge on development technologies and a better understanding of web dev.	A large team with many smart people may become messy, good communication will be essential	I play drums and love music!
Dragos	I like to learn and put in the time and work required.	I want to improve my general knowledge of software engineering, especially Spring Boot and SQL databases.	A team of seven will have trouble organizing meeting times and might have trouble getting started on tasks.	I like computers!
Bassam	I work best on projects that have real world use cases or ones that develop useful skills	I want to learn Agile, Scrum, SQL, database APIs, and web development	being slower than my teammates	I am attempting to memorize an entire book
David	I have experience with using Docker containers and creating applications in JavaFX and Java.	I want to become well-versed in API calls, databases, and backend servers.	I am concerned with our team's time management during exam season (we are all taking 5+ classes).	I love keyboards!
Ethan	Developed and worked on microservices in Spring Boot during my previous internship	I want to improve my communication skills and learn to work better in a team.	I am concerned that I may not be able to contribute as much as I would like to the project.	Co-founded Claude Builder Club (CBC) at McGill
Minh	I have had experience with web dev and have worked with database before	I want to about Scrum and Agile work style to prepare for the industry	I'm concerned that I will over optimize on unnecessary things	Developer for EC-SESS website. If something broke it is because of me :)
Jason	I am reliable and love to develop web applications	I want to learn about the workflow for a software engineer	Developing a clothing store application from the ground up might be tricky	I love tinkering with watches.

Roles and Responsibilities

What are the roles needed for this team to be successful?

We are going to need the following roles:

- Documentation manager
- Project manager (scrum master)
- Software lead
- Creative director

How are we assigning these roles?

We are assigning these roles on a voluntary basis, also taking into consideration the strengths and weaknesses of every member of the team. For example, since Santiago enjoys writing and maintaining documentation, he will be the documentation manager. Jason, on the other hand, has more of an artistic style, so he will be the creative director. Similarly, we will assign the other roles to the other members of the team.

How will we keep each other accountable?

Since this is a team project, it is crucial that everyone gets their assigned job done, as we need the contributions of everyone to successfully proceed in the project. In order to keep each other accountable, we will as a team keep checks on the contributions of all members, ensuring that everyone is progressing well with their work, and helping each other if we need to.

How will we keep ourselves organized as a team?

First, the documentation manager will ensure that the project documentation is up to date so that everyone can always refer to it when they need a refresher on progress. We will also be using the functionalities of GitHub to keep track of work to do, and the development that is made. Finally, we will communicate as a group to ensure that everyone is on the same page.

Communication

What is our preferred means of communication?

- (a) We will communicate via: a Discord group chat, where we can discuss via text or video call
- (b) Our expectations for response-time between communications is: for general discussions, 48 hours. As we get close to the deadline, 24 hours or less.

What are the measures our team will take to minimize miscommunication?

To minimize miscommunication, we will make sure to send all important in the group chat, even if we already mentioned them in person. That way, everyone can have access to the message and the information. We will also have a team member (probably the documentation manager) take notes during meetings, and these notes will be available to everyone as part of the project Wiki. This way, no information will be lost.

If we feel the need to speak with the course instructor about an issue or team problem, what is our team's norm?

We will first discuss openly within the team, to see if we can find a solution. If that doesn't work, we will have a member of the team be the news messenger and the one who will maintain contact with the instructor.

Psychological Safety

What are three actions our team can take to foster psychological safety in the team?

1. Give positive reinforcement to the team, especially when things get hard and complicated.
2. Have an environment open to ideas and different perspectives. Nobody shall try to enforce their opinion or solution.
3. Help each other and listen to other team member's struggles and preoccupations.

Decision Making

Identify potential obstacles your team may face in terms of decision making.

We have a team with a lot of members, all with different experiences and methods for working. This can make decisions complicated, especially if two persons or more have different opinions and they cannot come to an agreement. Since there is also a design aspect to this project, it might be an obstacle to decide on specific design choices, since not everyone has the same tastes.

How will your team ensure that your decision-making processes are accessible and equitable?

When such arguments and decisions arise, we will be performing votes within the group chat in order to decide. This way, everyone has their say on the matter and a decision is taken in an equal way.

Celebrate

Describe ways the team will support and celebrate each other.

Since we are all friends in the group, we will celebrate our achievements by organizing group activities, like going out to eat as a team. We will also support each other by highlighting our good actions and by allowing everyone to shine and contribute to the project.

Summary

In summary, we agree to be nice with each other and work effectively for the purpose of having the best project and a fun semester.

As a team, we have discussed the above questions and consent to the agreements. If we encounter difficulties, we will speak with one another and seek help from the Teamwork Program Facilitators and/or the Course Instructor. We recognize that this project is a learning process.
